DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Ode et. al US 2001/0024183. Regarding claim 1, Ode teaches a liquid crystal display device comprising a liquid crystal display panel, at least one flexible printed circuit board (see figure 19A and 19B element FPC1), having driver IC's mounted thereon; wherein at least two driver ICs are cascaded (see [0018]) with respect to input signals.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ode as applied to claim 1 above, and further in view of Murai US Patent Application Publication

2002/0057235. Ode teaches a PCB arranged along one side of the liquid crystal panel connected by a flexible PCB. Ode teaches all the limitations of the claim except a plurality of flexible printed circuit boards connecting the liquid crystal panel to the printed circuit board. Murai teaches a plurality of flexible printed circuit boards (figure 7, element 3) used to connect the display panel to the PCB to be conventional in the art (see [0005], [0007], and [0031]). There are associated benefits of conventionality, such as proven effectiveness, steady supply chains, and reduced costs. Therefore, at the time of the invention it would have been obvious to one of ordinary skill in the art to apply a plurality of flexible printed circuit boards instead of one in Ode's invention because this provides a proven effectiveness, steady supply chain, and reduced costs.

Claim 3 is rejected under 35 U.S.C. 103(a) as obvious over Ode. Ode does not disclose a flexible printed circuit board has input terminals the number of which is the same as that of input terminals of one driver IC, however, a cascade arrangement inherently has the driver ICs arranged in a sequence therefore only 1 set of inputs is necessary for a cascade configuration. Thus the limitation is inherent or obvious over the reference.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. US Patents 6690347, 6519020, 6195148, 6061246, 5959709, 5670994, 5402255.
